

Alireza Nezami

Senior Mobile Developer (Flutter & Native)

Location: Istanbul, Türkiye **Email:** alireza.nezami75@gmail.com

Linkedin: [linkedin.com/in/alireza-nezami](https://www.linkedin.com/in/alireza-nezami) **Phone:** +90 (543) 74379 66

Senior Mobile Engineer with **9+ years** of expertise in developing **high-performance** applications for millions of users. Proven track record at **Devotel and Golden Equator** Group in architecting modular systems using **Flutter, Kotlin, Kotlin Multiplatform, Jetpack Compose, and MVI/MVVM**. Expert in **optimizing app performance**, evidenced by a **35% reduction in build times** and **60% decrease in crash rates**. Strong advocate for **Clean Architecture and TDD**, with extensive experience leading international remote teams and mentoring junior developers in Agile environments.

TECHNICAL SKILLS

Languages: (Expert) **Dart, Kotlin**, Java (Legacy migration), **XML**, SQL, GraphQL, Android Studio

Frameworks: **Flutter, Jetpack Compose**, Android SDK, WorkManager, **Room**, Navigation, **Kotlin Multiplatform, Compose Multiplatform**

Architecture: **MVI, MVVM, Clean Architecture**, Multi-module, **Dagger-Hilt**.

Reactive: **Coroutines, Flow** (Expert), LiveData, Material Design 3, Compose Navigation

Testing: **Unit Testing** (JUnit, Mockk), UI Testing (Espresso), Robolectric

DevOps: CI/CD (**GitHub Actions**, Jenkins, Fastlane), **Git**, Gradle

WORK EXPERIENCE

Senior Flutter Developer

April 2024 - Present Remote

Devotel

- Led development of a fitness & habit-tracking cross-platform application (**Flutter, Dart, MVVM/MVI**) serving **400K+ monthly active users**, achieving a **4.7** Play Store **rating**.
- Architected a scalable, modular codebase using **Provider and Bloc for State Management and Clean Architecture** principles, significantly improving maintainability.

- Optimized **CI/CD pipelines** with **GitHub Actions and Fastlane**, implementing automated integration and unit tests (**flutter_test, integration_test**) to increase code coverage to 85%.
- **Mentored 5 junior engineers** on best practices in Flutter development, code reviews, and performance optimization.
- Developed and integrated custom platform-specific **low-level audio management** modules via **Platform Channels**, incorporating **DSP signal processing** techniques for real-time audio analysis and optimization.

Senior Android Developer

September 2023 – April 2024 – Remote

Golden Equator Group

- Developed and maintained **3 enterprise Android applications (Java → Kotlin migration)** used by 500K+ users in the data analytics domain.
- Designed **responsive UI/UX** with ConstraintLayout, **Material Design, and Data Binding**, improved user retention by 28%.
- Built **offline-first architecture** using **Room** Persistence, **WorkManager**, and Sync Adapters for real-time data synchronization.
- Optimized network layer with **Retrofit, OkHttp, and caching strategies**, reduced API latency by 50%.
- Improved **unit and instrumentation tests** with **Mockito, Espresso**, and Robolectric, achieving 80%+ code coverage.

Senior Android Developer

October 2022 – September 2023 – Remote

Solid-ICT

- Reduced **app startup time by 42%** through **lazy loading, ProGuard/R8** optimization, and **memory leak** detection using LeakCanary.
- Integrated **Firebase (Analytics, Crashlytics, Remote Config, A/B Testing)** and third-party SDKs (**Stripe, Google Maps, Retrofit**).
- Collaborated with **backend** (Node.js, Python) and iOS teams using RESTful APIs and **GraphQL**.
- Led Kotlin migration initiative across **200K+ LOC**, **improving null safety** and reducing runtime crashes by 60%.

Android Developer

August 2017 – September 2022 – Hybrid

Raychat

- Implemented a **high-performance SDK** with the Java programming language, utilizing **socket optimization**
- facilitated seamless integration for **third-party developers**, increasing the adoption rate by 40% within the first quarter of launch.
- Architected a **modular framework** with **XML**, streamlining feature integration and ensuring **scalability**.
- Reduced development time for new **UI components** by 30%, while maintaining high code quality and **performance standards**.

EDUCATION

Bachelor of Science in Computer Science

September 2017 – 3.8/4.014

Tabriz Technical College • Tabriz, Iran

Projects

My Singtel app

A centralized platform for Singtel customers to manage telecommunications services, view and pay bills, track real-time data usage, and access personalized deals and reward programs like Singtel Red and Prestige.

(<https://play.google.com/store/apps/details?id=com.singtel.mysingtel>)

- Led the implementation of secure billing and account consolidation features, optimizing network performance and enhancing user control over telecommunication services.

YouTrip

A multi-currency travel wallet and mobile app offering competitive exchange rates with zero foreign exchange fees across up to 150 currencies. Features include a one-click card lock system for security and integration with Google Pay for contactless payments.

(<https://play.google.com/store/apps/details?id=co.you.youapp>)

- Developed and secured the offline-first architecture for the multi-currency wallet, integrating 3DS 2.0 technology and enabling seamless Google Pay contactless payment functionality.

VideoApp

An Android sample project developed to demonstrate proficiency in modern Android development standards, architectures, and video app concepts.

(<https://github.com/AlirezaNezami96/VideoApp>)

- Designed using modern Android development practices and architecture, reflecting requirements for a take-home coding challenge.
